Object description

The single family house in Altenmarkt (Bavaria) is built with a basement outside the thermal envelope.

The building is a timber construction and all building materials are chosen under the aspect of their environmental compatibility.

A Compact Unit provides the heating with supply-air and also generates the hot water. The frost protection of the Compact Unit is realised with a brine-bearing subsoil heat exchanger.

For supporting the Compact Unit in a wood fired oven is additionally built-in. The preparation for upgrading the building with photovoltaic panels is done.
